

### Pantograph keyboard

The Pantograph keyboard is thin and tactile and is widely used on laptops. Quick typing is possible and reduces finger fatigue.

### Wireless (EZ switching)

With up to three Bluetooth devices, you can easily switch between devices to use.

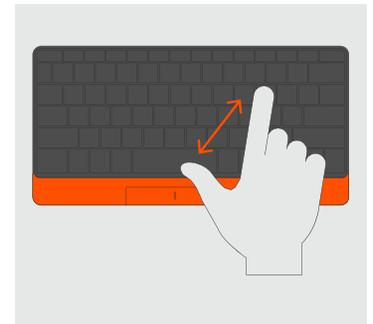

### Mouse

80 touch sensors hidden on the keyboard instantly turn your keyboard into a large touchpad. You can move and click the mouse like a touchpad on a regular laptop.

### Multi-touch

Supports up to 4-point touch gestures including pinch, zoom and screen scrolling. You can perform various special functions provided by operating system.

### Fast mode change

Mokibo saves 60% of mode change time between keyboard and touchpad which are 50~100 hours in a year.

### Increasing working efficiency

Mokibo saves the space of your bag and the area of your table.

### Switching between multi-platforms

Mokibo supports Windows, Android and Mac platforms. Mokibo sets its keyboard layout according to the platforms.

### Less arm movements

Mokibo has a keyboard and a touchpad in same place, so you don't need to move your hand to grab a mouse. It can reduce the repetitive strain injury on your arm muscles.

## Keyboard x Touchpad

**Mokibo turns the entire surface of the keyboard into a large touchpad.**

The various functions by the keyboard and touchpad are carried out in one place. The excellent portability of Mokibo and its graceful design will make your life much simpler.

Keyboard X Touchpad

## Technical Specification
